PROFESSIONAL SUMMARY

Senior QA Engineer with more than 10 years of experience in cybersecurity, SaaS, on-premises, and enterprise network-based products. Strong background in end-to-end, regression, and system testing across Linux and Windows environments. Led QA initiatives in complex security products, improving release quality and reducing critical defects. Recently expanded into AI-assisted automation to enhance testing efficiency.

WORK EXPERIENCE

Senior QA Tester, Proofpoint (formerly Illusive)

2021 – 2026

- Executed end-to-end QA testing for cybersecurity products, contributing to stable releases and reducing production defects. Focused on identity protection, xSPM, honeypots, and onboarding workflows.
- Designed and executed functional, regression, sanity, GUI, and end-to-end test scenarios that improved test coverage and reduced regression issues.
- Validated SaaS and on-prem deployments hosted in AWS across Linux, Windows endpoint, Docker/Podman, and PostgreSQL environments.
- Used Jira for defect tracking and TestRail for test planning, execution, and traceability.
- Create and maintain STD/test documentation using AI to support quality coverage and compliance.
- Building automation tests cases with AI-assisted tools to support a new DLP agent project.

Senior QA Tester / Tech Lead, AlgoSec

2015 – 2021

- Led QA efforts for security management platforms, improving testing efficiency and coordinating cross-team delivery. Focused in firewall environments (physical and virtual on ESX/AWS).
- Managed test planning and execution using TestRail and Jira in a Linux and PostgreSQL-based infrastructure.
- Promoted to Tech Lead in the QA suite group, overseeing automation testers and coordinating with cross-functional teams.
- Performed comprehensive testing including GUI, functionality, sanity, regression, and E2E.
- Produced STD documentation and participated in SCRUM-based development cycles.

QA Tester, Aladdin/Safenet

2009 – 2015

- Tested VPN and RDP solutions using physical token-based authentication in a secure data environment.
- Interfaced with SQL, OpenLDAP, Remote AD, ADAM, and CheckPoint firewalls.
- Worked with IAS, RAS, IIS, and PKI systems for OTP testing.
- Conducted GUI, functionality, sanity, regression, and E2E testing.
- Documented test procedures and results using STD format.

QA Tester, Microsoft

2008 – 2008

- Performed QA testing on PC health systems in WiFi environments.
- Utilized Product Studio and WTT Studio to test across a range of third-party routers.
- Focused on GUI, functionality, sanity, E2E, and stress testing.

SKILLS

Test Reporting Tools: TestRail | Jira

Test Types: Functional | Regression | Sanity | API | E2E | Load/Stress | Web

Technologies: Docker | Podman | PostgreSQL | ESX | OpenLDAP | Remote AD | PKI

Operating Systems: Linux (RHEL, CentOS) | Windows 7/10 | Windows Server (2008-2022)

Networking: TCP/IP | VPN | LAN/WAN | Firewall (Checkpoint/Palo Alto, Juniper) | Switch/Router configuration

Automation: Basic Java | AI-assisted tools | PlayWright

Cloud Services: Azure (AD,MDE) | AWS (S3, Lambda)

Logging platform: Grafana

Tool Stack: Jmeter | WireShark | NMAP

Certifications: CCNA (Cisco Certified Network Associate) - Coursework completed

Professional Development: Additional internal courses in QA methodologies as well as utilization of AI tools

Languages: Technical English - very well

Other: Familiarity with a variety of test equipment

QA Tester, *Netvision*

2007 – 2008

QA Tester, *Given Imaging Medical*

2007 – 2007

QA Tester, *Philips Medical Systems*

2005 – 2006

Network Administrator, *Dan Hotel Eilat*

2004 – 2005

Network Administrator, *IDF Armored Corps*

2001 – 2004

CORE STRENGTHS

- System-level QA thinking
- QA ownership
- Cross-functional collaboration
- Customer-impact analysis
- Team Player
- Commitment
- Risk-based testing
- Defect investigation
- Release readiness
- Automation-oriented test design
- Highly Motivated
