PROFESSIONAL SUMMARY

Senior QA Engineer with more than 10 years testing SaaS and web applications across the SDLC — functional, smoke/sanity, regression, integration, exploratory, API, and end-to-end. Makes risk-based release calls (what blocks vs. what ships with notes), writes reproducible defects, and has matured QA process in teams moving from informal coverage to planned suites. Hands-on Playwright plus Claude Code / Windsurf for AI-assisted automation; automated suites executed through Jenkins CI/CD. Debugs web issues with browser DevTools, Wireshark, and Postman.

SKILLS

- Test Reporting:** TestRail, Jira, Confluence
- Test Types:** Functional, Smoke/Sanity, Regression, Integration, Exploratory, API, E2E, Acceptance/UAT, Load/Stress, Web
- CI/CD:** Jenkins (pipelines & job configuration); automated suites executed through CI/CD
- Technologies:** Docker, Podman, PostgreSQL, ESX, OpenLDAP, Remote AD, PKI, Git/GitHub
- Operating Systems:** Linux (RHEL, CentOS), Windows 7/10, Windows Server (2008–2022)
- Networking:** TCP/IP, HTTP/HTTPS, DNS (via AD), VPN, LAN/WAN, Firewall (Checkpoint / Palo Alto / Juniper / Fortinet FortiGate)
- Automation:** Playwright, JavaScript basics, Claude Code, Windsurf, ChatGPT, prompt engineering, Visual Studio
- Cloud Services:** Azure (AD, MDE), AWS (S3, Lambda)
- Tool Stack:** Postman, Swagger, JMeter, Wireshark, NMAP, Browser DevTools, Grafana

CERTIFICATIONS & DEVELOPMENT

- CCNA — Cisco Certified Network Associate (coursework completed)
- Internal courses in QA methodologies and AI-tool utilization
- Languages:** Hebrew — native · Technical English — very well

CORE STRENGTHS

- Risk-based testing
- Release readiness
- QA ownership
- System-level QA thinking
- Cross-functional collaboration
- Defect investigation
- Customer-impact analysis
- Automation-oriented test design
- Team player
- Highly motivated

WORK EXPERIENCE

Senior QA Tester · Proofpoint (formerly Illusive) 2021 – 2026

- Owned risk-based QA across the SDLC for SaaS cybersecurity products — deciding what is a release blocker vs. a known issue — contributing to stable releases and fewer production defects. Focused on identity protection, xSPM, honeypots, and onboarding workflows.
- Designed and executed smoke/sanity, functional, regression, integration, exploratory, GUI, and end-to-end suites, including edge-case and boundary coverage, tracked in TestRail and Jira.
- Validated SaaS and on-prem deployments hosted in AWS across Linux, Windows endpoint, Docker/Podman, and PostgreSQL environments.
- Performed REST API testing with Postman (HTTP/HTTPS) and verified microservices-based SaaS onboarding via pod availability and log checks on ArgoCD; debugged web issues with browser DevTools (console / network) and Wireshark. Automated suites executed through Jenkins CI/CD (job configuration).
- Create and maintain STP/STD using Claude Code, ChatGPT, and prompt engineering (Windsurf on the job) to support coverage and audit-ready test documentation.
- Building Playwright automation with Claude Code / Windsurf, including AI agent skills, rules files, and MCP / tool integrations, on a new DLP agent project.

Senior QA Tester / Tech Lead · AlgoSec 2015 – 2021

- Matured QA process and coverage for security management platforms, coordinating with developers and product through the SDLC. Focused on firewall environments (physical and virtual on ESX/AWS).
- Promoted to Tech Lead in the QA suite group: guided automation testers, championed a testing culture with developers, and articulated speed-vs-quality trade-offs so risk, not pressure, drove release calls.
- Tested workflow and change-request flows as part of the FireFlow team — validating multi-stage approval processes and business rules on an enterprise platform.
- Managed test planning in TestRail and Jira; produced STP/STD; participated in Scrum / sprint planning, reviewed requirements for testability, and validated acceptance criteria before sign-off.

QA Tester · Aladdin / SafeNet 2009 – 2015

- Tested VPN and RDP solutions using physical token-based authentication in a secure data environment.
- Interfaced with SQL, OpenLDAP, Remote AD, ADAM, and CheckPoint firewalls.
- Worked with IAS, RAS, IIS, and PKI systems for OTP testing.
- Conducted GUI, functionality, sanity, regression, and E2E testing.
- Documented test procedures and results using STD format.

QA Tester · Microsoft 2008

- Performed QA testing on PC health systems in WiFi environments.
- Utilized Product Studio and WTT Studio to test across a range of third-party routers.
- Focused on GUI, functionality, sanity, E2E, and stress testing.
